EDUCATION

Georgia State University - *B.S. Computer Science* **GPA:** 3.80/4.00
Honors: Magna Cum Laude, President's List (2022- 2023), Dean's List (2024)

Georgia State University - *M.S. Computer Science* Jan 2026 - Dec 2027
Current GPA: 4.00/4.00

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, C++, SQL, Dart, HTML, CSS, PHP
Tools/Databases: Git, GitHub, Firebase, MySQL, Shopify Liquid, Unix, Ollama
Libraries/Frameworks: React, Node.js, Django, Flutter, PyTorch, Scikit-learn

WORK EXPERIENCE

Shopify Web Developer (Freelance) | Liquid, HTML, CSS Sep 2024 - Jan 2025

- Built and deployed custom Shopify storefront features for small business clients using Liquid, HTML, and CSS.
- Improved usability and conversion flow through tailored UI/UX enhancements across multiple client sites.
- Managed full development lifecycle from client requirements gathering to production deployment.
- Learned Shopify theme architecture independently and delivered production-ready solutions within 30 days.

PROJECT EXPERIENCE

Desktop Website Portfolio | HTML, CSS, JavaScript - Portfolio Link - GitHub

- Built an interactive portfolio website with a desktop-style interface, showcasing 10+ projects to recruiters/clients.
- Engineered modular JavaScript for dynamic window management, reducing code redundancy by 40%.
- Enhanced user engagement with audio feedback effects, improving interactivity and user engagement.

Web Crawler & Graph Analysis | Python, SQL, Gephi - GitHub

- Automated web crawling to map 40,000+ internal links across test sites, enabling scalable structural analysis.
- Generated adjacency matrices and edge lists for graph modeling, reducing manual link-mapping effort.
- Produced GraphML exports for Gephi visualization, improving SEO and research insights with clear site hierarchy mapping.

Meeting Debrief AI Assistant | Python, HTML, CSS, SQLite, Ollama - GitHub

- Designed a cross-platform Python launcher (Mac/Windows/Linux) that auto-locates and starts Ollama, pulls missing models, initializes SQLite, and serves both the HTML frontend and a REST API on a single port using only the Python standard library
- Shipped a full-stack AI productivity tool end-to-end: local LLM, browser-based speech-to-text, persistent history with full-text search, streaming UI with live token rendering, and a self-contained launcher that reduces setup to a single command.
- Implemented production-grade error handling across an LLM streaming pipeline: pre-flight health checks, exponential backoff retry, a 30-second token-timeout watchdog, partial debrief recovery on mid-stream failure, and per-model context window estimation with user warnings.

Machine Learning Research Paper

- Researched LLM applications in PCG across game design, rule synthesis, and reinforcement learning.
- Evaluated model limitations including hallucination, rule consistency, and long-horizon reasoning.
- Analyzed how LLMs translate natural language into executable procedural systems and reward functions.

Food Delivery App MVP

- Led a 3-person team in developing a cross-platform Flutter food delivery MVP within 10 weeks.
- Designed UI/UX workflows in Figma and coordinated implementation across the team.
- Managed GitHub collaboration, resolving merge conflicts and maintaining delivery timelines.
